aquaoperations
A Glanua Company

Technical & Laboratory Services
Specialists in Water & Wastewater Management.

What we do

At Aqua Operations, we provide rapid-response technical and laboratory services designed to keep your facility running smoothly, safely, and within regulatory limits. We don't just test water, we protect your operations.

Process Engineering

Our process engineering team can support in designing sampling and testing surveys that meet water utility asset standards and project specifications for:

- Pre-construction design surveys
- Post-construction performance testing
- Process commissioning, troubleshooting, optimisation

Flow and Load Surveys

We supply and install temporary equipment for every scenario:

- Autosamplers - composite and diurnal
- Flow Meters - In-channel, on pipe
- Level sensors, Rain gauges and more

Sampling

Dedicated site operatives are deployed from our local bases around the UK to provide the end-to-end solutions including spot, composite, diurnal sampling and cold transport of samples to the laboratory for testing.

Laboratory Analysis

AOL operatives are trained in laboratory techniques for rapid turnaround of results either through:

- Provision of fully equipped mobile lab for rapid same day results
- Provision of all equipment for on site testing in site provided lab space for same day results
- Cold transport samples daily to AOL lab for quick turnaround results (<48 hours)
- Transport samples to UKAS labs for accredited testing
